

Franklin Water Pumps

Franklin Electric has the right pumping system for the job.

Problems with your water pump?

A private water well is one of the best sources of water for your home, but it may not be the best source of water pressure. Homes with conventional private wells often experience inadequate or low water pressure for many reasons: low well levels, increased water usage, home addition or a new irrigation system.

No matter what the cause, fluctuating water pressure and flow can disrupt the way your home works. Whether you need to boost your water pressure, supply water to your household, or water your garden, Franklin Electric has the right pumping system for the job.

Franklin Electric's submersible FPS Series offers innovative design options, such as Tri-Seal, high capacity, environmental and boosting pumps ideal for a variety of applications. Combined with the availability you need, these pumps improve efficiency and minimize wear, even when handling abrasives.

With a Franklin Electric constant pressure system you can wash laundry, water the garden and run the shower all at the same time, without sputtering water and diminished flow.
